Cyclin D2 (Phospho-Thr280) Antibody

Catalog No: #12122

Package Size: #12122-1 50ul #12122-2 100ul

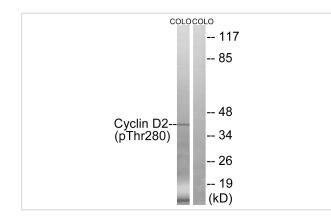

Orders: order@signalwayantibody.com Support: tech@signalwayantibody.com

| Description | | | | |
|-----------------------|---|--|--|--|
| Product Name | Cyclin D2 (Phospho-Thr280) Antibody | | | |
| Host Species | Rabbit | | | |
| Clonality | Polyclonal | | | |
| Purification | Antibodies were produced by immunizing rabbits with synthetic phosphopeptide and KLH conjugates. | | | |
| | Antibodies were purified by affinity-chromatography using epitope-specific phosphopeptide. Non-phospho | | | |
| | specific antibodies were removed by chromatogramphy using non-phosphopeptide. | | | |
| Applications | WB | | | |
| Species Reactivity | Hu Ms Rt | | | |
| Specificity | The antibody detects endogenous levels of Cyclin D2 only when phosphorylated at threonine 280. | | | |
| Immunogen Type | peptide | | | |
| Immunogen Description | Peptide sequence around phosphorylation site of threonine 280 (A-S-T(p)-P-T) derived from Human Cyclin | | | |
| | D2. | | | |
| Target Name | Cyclin D2 | | | |
| Modification | Phospho | | | |
| Other Names | cyclin D2; G1/S-specific cyclin D2 | | | |
| Accession No. | Swiss-Prot#:P30279;NCBI Gene#:894 | | | |
| Uniprot | P30279 | | | |
| GeneID | 894; | | | |
| SDS-PAGE MW | 40kd | | | |
| Concentration | 1.0mg/ml | | | |
| Formulation | Rabbit IgG in phosphate buffered saline (without Mg2+ and Ca2+), pH 7.4, 150mM NaCl, 0.02% sodium azide | | | |
| | and 50% glycerol. | | | |
| Storage | Store at -20°C | | | |
| | | | | |

Western blotting: 1:500~1:3000

Images

Western blot analysis of extracts from COLO cells, treated with EGF (200ng/ml, 30mins), using Cyclin D2 (Phospho-Thr280) antibody #12122. The lane on the right is treated with the synthesized peptide.

Background

Regulatory component of the cyclin D2-CDK4 (DC) complex that phosphorylates and inhibits members of the retinoblastoma (RB) protein family including RB1 and regulates the cell-cycle during G1/S transition. Phosphorylation of RB1 allows dissociation of the transcription factor E2F from the RB/E2F complex and the subsequent transcription of E2F target genes which are responsible for the progression through the G1 phase. Hypophosphorylates RB1 in early G1 phase. Cyclin D-CDK4 complexes are major integrators of various mitogenenic and antimitogenic signals. Also substrate for SMAD3, phosphorylating SMAD3 in a cell-cycle-dependent manner and repressing its transcriptional activity. Component of the ternary complex, cyclin D2/CDK4/CDKN1B, required for nuclear translocation and activity of the cyclin D-CDK4 complex By similarity.
