Background

The protein encoded by this gene binds to the plus⁺ ends of actin monomers and filaments to prevent monomer exchange. The encoded

calcium-regulated protein functions in both assembly and disassembly of actin filaments. Defects in this gene are a cause of familial amyloidosis Finnish type (FAF). Multiple transcript variants encoding several different isoforms have been found for this gene.,P06396,2934,https://www.uniprot.org/uniprot/P06396,https://www.ncbi.nlm.nih.gov/gene/?term=2934,,, 11880,11880,38507,,GLRA1 antibody,Rabbit,Polyclonal,,,Antibodies were purified by affinity purification using immunogen.,WB,"WB 1:500 - 1:1000
