# galanin receptor 2 antibody

Catalog No: #22465

Description

Orders: order@signalwayantibody.com Support: tech@signalwayantibody.com

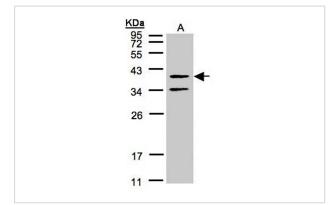

galanin receptor 2 antibody Product Name Host Species Rabbit Clonality Polyclonal Purification Purified by antigen-affinity chromatography. Applications WB Species Reactivity Hu Immunogen Type Peptide Synthetic peptide contain a sequence corresponding to a region within amino acids 243 and 306 of Human Immunogen Description GALR2 Target Name galanin receptor 2 Accession No. Swiss-Prot:O43603Gene ID:8811 Uniprot O43603 GenelD 8811; Concentration 1mg/ml Formulation Supplied in 0.1M Tris-buffered saline with 10% Glycerol (pH7.0). 0.01% Thimerosal was added as a preservative. Storage Store at -20°C for long term preservation (recommended). Store at 4°C for short term use.

## Application Details

#### Predicted MW: 42kd

Western blotting: 1:500-1:3000

#### Images

Sample(30 ug of whole cell lysate) A: A431 12% SDS PAGE Primary antibody diluted at 1: 500

### Background

Galanin is an important neuromodulator present in the brain, gastrointestinal system, and hypothalamopituitary axis. It is a 30-amino acid non-C-terminally amidated peptide that potently stimulates growth hormone secretion, inhibits cardiac vagal slowing of heart rate, abolishes sinus

arrhythmia, and inhibits postprandial gastrointestinal motility. The actions of galanin are mediated through interaction with specific membrane receptors that are members of the 7-transmembrane family of G protein-coupled receptors. GALR2 interacts with the N-terminal residues of the galanin peptide. The primary signaling mechanism for GALR2 is through the phospholipase C/protein kinase C pathway (via Gq), in contrast to GALR1, which communicates its intracellular signal by inhibition of adenylyl cyclase through Gi. However, it has been demonstrated that GALR2 couples efficiently to both the Gq and Gi proteins to simultaneously activate 2 independent signal transduction pathways. [provided by RefSeq]
