## Background

Participates in Wht signaling by binding to the cytoplasmic C-terminus of frizzled family members and transducing the Wht signal to down-stream effectors. Plays a role both in canonical and non-canonical Wht signaling. Plays a role in the signal transduction pathways mediated by multiple Wht genes. Required for LEF1 activation upon WNT1 and WNT3A signaling. DVL1 and PAK1 form a ternary complex with MUSK which is important for MUSK-dependent regulation of AChR clustering during the formation of the neuromuscular junction (NMJ).
