## Images

Western blot analysis of SFRP4 on different lysates using anti-SFRP4 antibody at 1/1,000 dilution. Positive control: Lane 1: Mouse testis Lane 2: A549 Lane 3: HepG2 Lane 4: SH-SY-5Y

Flow cytometric analysis of A549 cells with SFRP4 antibody at 1/100 dilution (purple) compared with an unlabelled control (cells without incubation with primary antibody; yellow). Alexa Fluor 488-conjugated goat anti-rabbit IgG was used as the secondary antibody.

## Background

Soluble frizzled-related proteins (sFRPS) function as modulators of Wnt signaling through direct interaction with Wnts. They have a role in regulating cell growth and differentiation in specific cell types. SFRP4 plays a role in bone morphogenesis. May also act as a regulator of adult uterine morphology and function. May also increase apoptosis during ovulation possibly through modulation of FZ1/FZ4/WNT4 signaling. Has phosphaturic effects by specifically inhibiting sodium-dependent phosphate uptake.
