

Mouse Transmembrane protease serine 5 (TMPRSS5) ELISA Kit

Catalog No: #EK6316

Orders: order@signalwayantibody.comSupport: tech@signalwayantibody.com

Package Size: #EK6316-1 48T #EK6316-2 96T

Description

Product Name	Mouse Transmembrane protease serine 5 (TMPRSS5) ELISA Kit
Brief Description	ELISA Kit
Applications	ELISA
Species Reactivity	Mouse (<i>Mus musculus</i>)
Other Names	MGC141886; MGC148044; SPINESIN;
Accession No.	Q9ER04
Uniprot	Q9ER04
GeneID	80893;
Storage	<p>The stability of ELISA kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.</p> <p>The loss rate was determined by accelerated thermal degradation test. Keep the kit at 37C for 4 and 7 days, and compare O.D.values of the kit kept at 37C with that of at recommended temperature. (referring from China Biological Products Standard, which was calculated by the Arrhenius equation. For ELISA kit, 4 days storage at 37C can be considered as 6 months at 2 - 8C, which means 7 days at 37C equaling 12 months at 2 - 8C).</p>

Application Details

Detect Range:15.6-1000 pg/mL

Sensitivity:7.5 pg/mL

Sample Type:Serum, Plasma, Other biological fluids

Sample Volume: 1-200 µL

Assay Time:1-4.5h

Detection wavelength:450 nm

Product Description

Detection Method:SandwichTest principle:This assay employs a two-site sandwich ELISA to quantitate TMPRSS5 in samples. An antibody specific for TMPRSS5 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyTMPRSS5 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for TMPRSS5 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of TMPRSS5 bound in the initial step. The color development is stopped and the intensity of the color is measured.**Product Overview:**TMPRSS5 encodes a protein that belongs to the serine protease family. The deduced 457-amino acid protein shows a simple type II transmembrane structure consisting of a short N-terminal cytoplasmic domain, a transmembrane domain, a stem region with a scavenger receptor-like domain, a serine protease domain that includes the essential his, asp, and ser catalytic triad, and an extracellular region containing 5 N-glycosylation sites. TMPRSS5 shares 38.5 to 44.5% sequence similarity with other transmembrane serine proteases. Northern blot analysis detected a 2.3-kb transcript specifically in brain. Western blot analysis indicated a mass of 30 kD for the recombinant protein and an apparent mass of 53 kD for the fully glycosylated form expressed in human brain and cerebral spinal fluid.

Note: This product is for in vitro research use only
