Human Serine/threonine-protein kinase 31 (STK31) ELISA Kit

SAB Signalway Antibody

Catalog No: #EK6691

Package Size: #EK6691-1 48T #EK6691-2 96T

Orders: order@signalwayantibody.com Support: tech@signalwayantibody.com

Description

Product Name	Human Serine/threonine-protein kinase 31 (STK31) ELISA Kit
Brief Description	ELISA Kit
Applications	ELISA
Species Reactivity	Human (Homo sapiens)
Other Names	FLJ16102; SGK396; TDRD8; OTTHUMP00000201935 sugen kinase 396 tudor domain containing 8
Accession No.	Q9BXU1
Uniprot	Q9BXU1
GeneID	56164;
Storage	The stability of ELISA kit is determined by the loss rate of activity. The loss rate of this kit is less than 5%
	The stability of ELIGA Kit is determined by the loss rate of activity. The loss rate of this kit is less than 5%
	within the expiration date under appropriate storage condition.
	within the expiration date under appropriate storage condition.
	within the expiration date under appropriate storage condition. The loss rate was determined by accelerated thermal degradation test. Keep the kit at 37C for 4 and 7 days,

Application Details

Detect Range:0.156-10 ng/mL
Sensitivity:0.057 ng/mL
Sample Type:Serum, Plasma, Other biological fluids
Sample Volume: 1-200 μL
Assay Time:1-4.5h
Detection wavelength:450 nm

Product Description

Detection Method:SandwichTest principle:This assay employs a two-site sandwich ELISA to quantitate STK31 in samples. An antibody specific for STK31 has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anySTK31 present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for STK31 is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of STK31 bound in the initial step. The color development is stopped and the intensity of the color is measured. Product Overview: This au protein kinase belongs to the family of transferases, specifically those transferring a phosphate group to the sidechain oxygen atom of serine or threonine residues in proteins. This enzyme participates in 14 metabolic pathways: erbb signaling pathway, cell cycle, wnt signaling pathway, hedgehog signaling pathway, axon guidance, focal adhesion, b cell receptor signaling pathway, insulin signaling pathway, melanogenesis, alzheimer's disease, colorectal cancer, endometrial cancer, prostate cancer, and basal cell carcinoma. Expressed in the brain, particularly in cortical and hippocampal neurons. Weakly expressed in spinal cord and testis. No expression in adipose tissue, bladder, cervix, colon, esophagus, heart, kidney, liver, lung, ovary, placenta, prostate, skeletal muscle, small intestine, spleen, testis, thymus, thyroid or trachea.

Note: This product is for in vitro research use only
