## Hamster Interleukin-1 beta (IL1B) ELISA Kit

Catalog No: #EK10286

Package Size: #EK10286-1 48T #EK10286-2 96T

Orders: order@signalwayantibody.com Support: tech@signalwayantibody.com

## Description

| Product Name       | Hamster Interleukin-1 beta (IL1B) ELISA Kit  |  |  |  |
|--------------------|--|--|--|--|
| Brief Description  | ELISA Kit  |  |  |  |
| Applications       | ELISA  |  |  |  |
| Species Reactivity | Hamster (Mesocricetus; Cricetulus)   |  |  |  |
| Other Names        | IL-1; IL1-BETA; IL1F2; catabolin preinterleukin 1 beta pro-interleukin-1-beta                                    |  |  |  |
| Storage            | The stability of ELISA kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% |  |  |  |
|                    | within the expiration date under appropriate storage condition.  |  |  |  |
|                    | The loss rate was determined by accelerated thermal degradation test. Keep the kit at 37C for 4 and 7 days,      |  |  |  |
|                    | and compare O.D.values of the kit kept at 37C with that of at recommended temperature. (referring from China     |  |  |  |
|                    | Biological Products Standard, which was calculated by the Arrhenius equation. For ELISA kit, 4 days storage      |  |  |  |
|                    | at 37C can be considered as 6 months at 2 - 8C, which means 7 days at 37C equaling 12 months at 2 - 8C).         |  |  |  |
|                    |  |  |  |  |

| Application Details          |                       |  |  |
|------------------------------|-----------------------|--|--|
| Detect Range:15.6-1000 pg/mL |                       |  |  |
| Sensitivity:7 pg/mL          |                       |  |  |
| Sample Type:Serum, Plasma, O | ner biological fluids |  |  |
| Sample Volume: 1-200 µL      |                       |  |  |
| Assay Time:1-4.5h            |                       |  |  |
| Detection wavelength:450 nm  |                       |  |  |

## **Product Description**

Detection Method:SandwichTest principle:This assay employs a two-site sandwich ELISA to quantitate IL-1B in samples. An antibody specific for IL-1B has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyIL-1B present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for IL-1B is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of IL-1B bound in the initial step. The color development is stopped and the intensity of the color is measured.

Note: This product is for in vitro research use only
