Product Name	Human Glucose-6-phosphatase (G-6-Pase) ELISA Kit	
Brief Description	ELISA Kit	
Applications	ELISA	
Species Reactivity	Human (Homo sapiens)	
Other Names	G6PT; GSD1; GSD1a; MGC163350;	
Accession No.	P35575	
Uniprot	P35575	
GeneID	2538;	
Storage	The stability of ELISA kit is determined by the loss rate of activity. The loss rate of this kit is less than 5%	
	within the expiration date under appropriate storage condition.	
	The loss rate was determined by accelerated thermal degradation test. Keep the kit at 37C for 4 and 7 days,	
	and compare O.D.values of the kit kept at 37C with that of at recommended temperature. (referring from China	
	Biological Products Standard, which was calculated by the Arrhenius equation. For ELISA kit, 4 days storage	
	at 37C can be considered as 6 months at 2 - 8C, which means 7 days at 37C equaling 12 months at 2 - 8C).	

Application Details

Detect Range:78.1-5000 mIU/mL	
Sensitivity:39 mIU/mL	
Sample Type:Serum, Plasma, Other biological fluids	
Sample Volume: 1-200 µL	
Assay Time:1-4.5h	
Detection wavelength:450 nm	

Product Description

Detection Method:SandwichTest principle:This assay employs a two-site sandwich ELISA to quantitate G6PC in samples. An antibody specific for G6PC has been pre-coated onto a microplate. Standards and samples are pipetted into the wells and anyG6PC present is bound by the immobilized antibody. After removing any unbound substances, a biotin-conjugated antibody specific for G6PC is added to the wells. After washing, Streptavidin conjugated Horseradish Peroxidase (HRP) is added to the wells. Following a wash to remove any unbound avidin-enzyme reagent, a substrate solution is added to the wells and color develops in proportion to the amount of G6PC bound in the initial step. The color development is stopped and the intensity of the color is measured. Product Overview: Fibroblast growth factor 6 is a protein encoded by this gene is a member of the fibroblast growth factor (FGF) family. FGF family members possess broad mitogenic and cell survival activities, and are involved in a variety of biological processes, including embryonic development, cell growth, morphogenesis, tissue repair, tumor growth and invasion. This gene displayed oncogenic transforming activity when transfected into mammalian cells.

The mouse homolog of this gene exhibits a restricted expression profile predominantly in the myogenic lineage, which suggested a role in muscle regeneration or differentiation. Marics et al. (1989) showed that the cloned normal FGF6 gene transformed mouse NIH 3T3 fibroblasts using both focus and tumorigenicity assays.

Note: This product is for in vitro research use only
