

Recombinant Human LILRB2

Catalog No: #GP10538

Package Size: #GP10538-1 100ug

Orders: order@signalwayantibody.comSupport: tech@signalwayantibody.com

Description

Product Name	Recombinant Human LILRB2
Brief Description	Recombinant Protein
Immunogen Description	Fusion protein corresponding to a region derived from 483-598 amino acids of human LILRB2
Target Name	leukocyte immunoglobulin like receptor B2
Other Names	ILT4; LIR2; CD85D; ILT-4; LIR-2; MIR10; MIR-10
Accession No.	Swissprot:Q8N423Gene Accession:BC036827
Uniprot	Q8N423
Storage	-20~-80°C, pH 7.6 PBS

Background

This gene is a member of the leukocyte immunoglobulin-like receptor (LIR) family, which is found in a gene cluster at chromosomal region 19q13.4. The encoded protein belongs to the subfamily B class of LIR receptors which contain two or four extracellular immunoglobulin domains, a transmembrane domain, and two to four cytoplasmic immunoreceptor tyrosine-based inhibitory motifs (ITIMs). The receptor is expressed on immune cells where it binds to MHC class I molecules on antigen-presenting cells and transduces a negative signal that inhibits stimulation of an immune response. It is thought to control inflammatory responses and cytotoxicity to help focus the immune response and limit autoreactivity. Multiple transcript variants encoding different isoforms have been found for this gene.
