

Recombinant Human MFAP3L

Catalog No: #GP11750

Package Size: #GP11750-1 100ug

Orders: order@signalwayantibody.comSupport: tech@signalwayantibody.com

Description

Product Name	Recombinant Human MFAP3L
Brief Description	Recombinant Protein
Immunogen Description	Fusion protein corresponding to a region derived from 29-102 amino acids of human microfibillar-associated protein 3-like
Target Name	microfibillar-associated protein 3-like
Other Names	NYD-sp9
Accession No.	Swissprot:O75121Gene Accession:NP_067679
Uniprot	O75121
GenID	9848;
Storage	-20~-80°C, pH 7.6 PBS

Background

MFAP3L (microfibillar-associated protein 3-like), also known as HSD39 or testis development protein NYD-SP9, is a 409 amino acid single-pass type I cell membrane protein that contains one Ig-like (immunoglobulin-like) domain. Found primarily in testis, MFAP3L is encoded by a gene that is located on chromosome 4 and is expressed as three isoforms due to alternative splicing events. Representing approximately 6% of the human genome, chromosome 4 contains nearly 900 genes, one of which is the Huntingtin gene, which is found to encode an expanded glutamine tract in cases of Huntington's disease.?
