

Recombinant Human ZNF621

Catalog No: #GP12327

Package Size: #GP12327-1 100ug

Orders: order@signalwayantibody.comSupport: tech@signalwayantibody.com

Description

Product Name	Recombinant Human ZNF621
Brief Description	Recombinant Protein
Immunogen Description	Fusion protein corresponding to a region derived from 240-439 amino acids of human ZNF621
Target Name	zinc finger protein 621
Accession No.	Swissprot:Q6ZSS3Gene Accession:BC113415
Uniprot	Q6ZSS3
GeneID	285268;
Storage	-20~-80°C, pH 7.6 PBS

Background

As a member of the krueppel C2H2-type zinc-finger protein family, ZNF621 (Zinc finger protein 621) is a 439 amino acid nuclear protein that contains one KRAB domain and seven C2H2-type zinc fingers. The gene encoding ZNF621 maps to human chromosome 3, which is made up of about 214 million bases encoding over 1,100 genes, including a chemokine receptor (CKR) gene cluster and a variety of human cancer-related gene loci. Marfan Syndrome, porphyria, von Hippel-Lindau syndrome, osteogenesis imperfecta and Charcot-Marie-Tooth Disease are a few of the numerous genetic diseases associated with chromosome 3. There are two isoforms of ZNF621 that are produced as a result of alternative splicing events.
