

Recombinant Human METAP1D

Catalog No: #GP12342

Package Size: #GP12342-1 100ug

Orders: order@signalwayantibody.comSupport: tech@signalwayantibody.com

Description

Product Name	Recombinant Human METAP1D
Brief Description	Recombinant Protein
Immunogen Description	Fusion protein corresponding to a region derived from 136-335 amino acids of human METAP1D
Target Name	methionyl aminopeptidase type 1D (mitochondrial)
Other Names	METAP1D; MAP 1D; Metap1I; MetAP 1D
Accession No.	Swissprot:Q6UB28Gene Accession:BC113644
Uniprot	Q6UB28
GeneID	254042;
Storage	-20~-80°C, pH 7.6 PBS

Background

The N-terminal methionine excision pathway is an essential process in which the N-terminal methionine is removed from many proteins, thus facilitating subsequent protein modification. In mitochondria, enzymes that catalyze this reaction are called methionine aminopeptidases (MetAps, or MAPs; EC 3.4.11.18) (Serero et al., 2003 [PubMed 14532271]).
