## Recombinant Human 4-1BB Ligand/TNFSF9

Catalog No: #AP60041

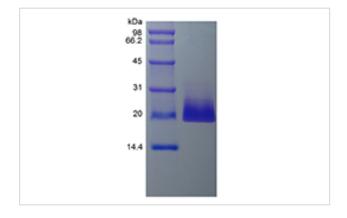

Package Size: #AP60041-1 5ug #AP60041-2 100ug #AP60041-3 500ug

Orders: order@signalwayantibody.com Support: tech@signalwayantibody.com

| Description     |                                                                                                                        |
|-----------------|------------------------------------------------------------------------------------------------------------------------|
| Product Name    | Recombinant Human 4-1BB Ligand/TNFSF9                                                                                  |
| Host Species    | E.coli                                                                                                                 |
| Purification    | > 95 % by SDS-PAGE and HPLC analyses.                                                                                  |
| Other Names     | TNFSF9, CD137L                                                                                                         |
| Uniprot         | P41273                                                                                                                 |
| GeneID          | 8744                                                                                                                   |
| Calculated MW   | Approximately 19.4 kDa, a single non-glycosylated polypeptide chain containing 184 amino acids.                        |
| Target Sequence | REGPELSPDD PAGLLDLRQG MFAQLVAQNV LLIDGPLSWY SDPGLAGVSL TGGLSYKEDT KELVVAKAGV                                           |

## Background

4-1BBL is a member of the tumor necrosis factor (TNF) receptor family. This receptor contributes to the clonal expansion, survival, and development of T cells. In addition, 4-1BBL expression is found on dendritic cells, follicular dendritic cells, natural killer cells, granulocytes and cells of blood vessel walls at sites of inflammation. CD137 has been shown to interact with TRAF2. The human 4-1BBL gene codes for a 254 amino acid type II transmembrane containing a 28 amino acid cytoplasmic domain, a 21 amino acid transmembrane domain, and a 205 amino acid extracellular domain (ECD). The human 4­1BBL ECD shares 32 % and 35 % a.a. identity with murine and rat ECD.

Note: This product is for in vitro research use only
