Uniprot P42261	
GenelD 2890;	
Concentration 1.0mg/ml	
Formulation Supplied at 1.0mg/mL in phosphate buffered saline (without Mg2+ and Ca2+), pH 7.4, 150mM Na	기, 0.02%
sodium azide and 50% glycerol.	
Storage Store at -20°C for long term preservation (recommended). Store at 4°C for short term use.	

## Application Details

Predicted MW: 110kd

Immunofluorescence: 1:100~1:200

## Images

Immunofluorescence staining of methanol-fixed Hela cells using GluR1(Ab-863) Antibody #21254.

## Background

Glutamate receptors are the predominant excitatory neurotransmitter receptors in the mammalian brain and are activated in a variety of normal neurophysiologic processes. These receptors are heteromeric protein complexes with multiple subunits, each possessing transmembrane regions, and all arranged to form a ligand-gated ion channel. The classification of glutamate receptors is based on their activation by different pharmacologic agonists. This gene belongs to a family of a-amino-3-hydroxy-5-methyl-4-isoxazole propionate (AMPA) receptors. Alternatively spliced transcript variants encoding different isoforms have been found for this gene.
