## Application Details

Western blotting: 1:500-1:2000
Immunohistochemistry: 1:25-1:100

## **Images**

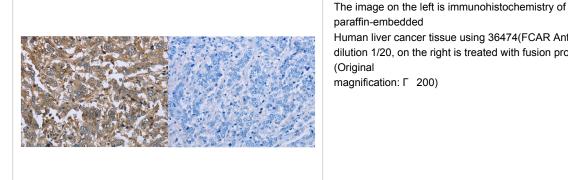

Gel: 8%SDS-PAGE Lysate: 40 EOg Lane: 293T cells

Primary antibody: 36474(FCAR Antibody) at

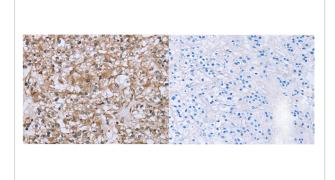

dilution 1/550

Secondary antibody: Goat anti rabbit IgG at 1/8000 dilution

Exposure time: 10 seconds

paraffin-embedded Human liver cancer tissue using 36474(FCAR Antibody) at dilution 1/20, on the right is treated with fusion protein. magnification: Γ 200)

The image on the left is immunohistochemistry of paraffin-embedded Human prostate cancer tissue using 36474(FCAR Antibody) dilution 1/20, on the right is treated with fusion protein. magnification: Γ 200)

## Background

This gene is a member of the immunoglobulin gene superfamily and encodes a receptor for the Fc region of IgA. The receptor is a transmembrane glycoprotein present on the surface of myeloid lineage cells such as neutrophils, monocytes, macrophages, and eosinophils, where it mediates immunologic responses to pathogens. It interacts with IgA-opsonized targets and triggers several immunologic defense processes, including phagocytosis, antibody-dependent cell-mediated cytotoxicity, and stimulation of the release of inflammatory mediators. Multiple alternatively spliced transcript variants encoding different isoforms have been described for this gene.

Note: This product is for in vitro research use only
