

NF- κ B2 p100 (phospho-Ser866/870) rabbit pAb

Catalog No: #13673

Package Size: #13673-1 50ul #13673-2 100ul

Description

Product Name	NF- κ B2 p100 (phospho-Ser866/870) rabbit pAb
Host Species	Rabbit
Clonality	Polyclonal
Purification	The antibody was affinity-purified from rabbit serum by affinity-chromatography using specific immunogen.
Applications	WB
Species Reactivity	Human, Mouse
Specificity	This antibody detects endogenous levels of Human Mouse NF- κ B2 p100 (phospho-Ser866 or 870)
Immunogen Description	Synthesized phospho peptide around human NF- κ B2 p100 (Ser866 and 870)
Conjugates	Unconjugated
Other Names	Nuclear factor NF- κ B p100 subunit (DNA-binding factor KBF2) (H2TF1) (Lymphocyte translocation chromosome 10 protein) (Nuclear factor of kappa light polypeptide gene enhancer in B-cells 2) (Oncogene Lym-10) (Lyt10) [Cleaved into: Nuclear factor NF- κ B p52 subunit]
Accession No.	Swiss Prot:Q00653 GeneID:4791
SDS-PAGE MW	100
Concentration	1 mg/ml
Formulation	Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% sodium azide.
Storage	-20°C/1

Application Details

WB 1:1000-2000

Background

nuclear factor kappa B subunit 2(NFKB2) Homo sapiens This gene encodes a subunit of the transcription factor complex nuclear factor-kappa-B (NF κ B). The NF κ B complex is expressed in numerous cell types and functions as a central activator of genes involved in inflammation and immune function. The protein encoded by this gene can function as both a transcriptional activator or repressor depending on its dimerization partner. The p100 full-length protein is co-translationally processed into a p52 active form. Chromosomal rearrangements and translocations of this locus have been observed in B cell lymphomas, some of which may result in the formation of fusion proteins. There is a pseudogene for this gene on chromosome 18. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Dec 2013],
