| Product Name          | SMYD2 Monoclonal Antibody                                               |
|-----------------------|-------------------------------------------------------------------------|
| Host Species          | Mouse                                                                   |
| Clonality             | Monoclonal                                                              |
| Clone No.             | 1G10-E11-H9                                                             |
| Isotype               | lgG2b                                                                   |
| Applications          | ELISA WB                                                                |
| Species Reactivity    | Hu Ms                                                                   |
| Immunogen Type        | Recombinant protein                                                     |
| Immunogen Description | Purified recombinant human SMYD2 protein fragments expressed in E.coli. |
| Conjugates            | Unconjugated                                                            |
| Target Name           | SMYD2                                                                   |
| Other Names           | KMT3C, HSKM-B, ZMYND14                                                  |
| Accession No.         | Swiss-Prot:Q9NRG4Gene ID:56950                                          |
| Formulation           | ascites                                                                 |

## **Application Details**

Predicted MW: 50kd
Western blotting: 1:1000

## **Images**

Western blot detection of SMYD2 in 3T3,HT1080

## Background

SET domain-containing proteins, such as SMYD2, catalyze lysine methylation. Protein-lysine N-methyltransferase that methylates both histones and non-histone proteins. Specifically methylates histone H3 'Lys-4' (H3K4me) and dimethylates histone H3 'Lys-36' (H3K36me2). Has also methyltransferase activity toward non-histone proteins.
