Immunohistochemical analysis of paraffin-embedded human kidney tissue using anti-KIM1 antibody. Counter stained with hematoxylin.

ICC staining KIM1 in Hela cells (red). The nuclear counter stain is DAPI (blue). Cells were fixed in paraformaldehyde, permeabilised with 0.25% Triton X100/PBS.

ICC staining KIM1 in PC-12 cells (green). The nuclear counter stain is DAPI (blue). Cells were fixed in paraformaldehyde, permeabilised with 0.25% Triton X100/PBS.

## Background

May play a role in T-helper cell development and the regulation of asthma and allergic diseases. Receptor for TIMD4 (By similarity). May play a role in kidney injury and repair. (Microbial infection) Acts as a receptor for hepatitis A virus. Acts as a receptor for ebolavirus and marburg virus by binding exposed phosphatidyl-serine at the surface of virion membrane. Acts as a receptor for Dengue virus by binding exposed phosphatidyl-serine at the surface of virion membrane.
