Product Datasheet

OTX2 Antibody FITC Conjugated

Catalog No: #C01333F

Package Size: #C01333F 100ul

Support: tech@signalwayantibody.com

Description OTX2 Antibody FITC Conjugated **Product Name Host Species** Rabbit Clonality Polyclonal Isotype IgG Purified by Protein A. Purification ICC IF Applications Species Reactivity Hu Ms Rt Immunogen Description KLH conjugated synthetic peptide derived from human OTX2 Conjugates **Target Name** OTX2 Other Names CPHD6; Homeobox protein OTX2; MCOPS 5; MCOPS5; MGC45000; Orthodenticle 2; Orthodenticle homeobox 2; Orthodenticle homolog 2 Drosophila; Orthodenticle homolog 2; Orthodenticle2; Otx 2; otx2;

0.01M TBS(pH7.4) with 1% BSA, 0.03% Proclin300 and 50% Glycerol.

Shipped at 4°C. Store at -20°C for one year. Avoid repeated freeze/thaw cycles.

Background

Transcription factors, OTX1 and OTX2, are two murine homologs of the Drosophila orthodenticle (OTD), show a limited amino acid sequence divergence. OTX1 and OTX2 play an important role during early and later events required for proper brain development in that they are involved in the processes of induction, specification and regionalization of the brain. OTX1 is involved in corticogenesis, sensory organ development and pituitary functions, while OTX2 is necessary earlier in development, for the correct anterior neural plate specification and organization of the primitive streak.

OTX2 is also required in the early specification of the neuroectoderm, which is destined to become the fore-midbrain, and both OTX1 and OTX2 co-operate in patterning the developing brain through a dosage-dependent mechanism. A molecular mechanism depending on a precise threshold of OTX proteins is necessary for the correct positioning of the isthmic region and for anterior brain patterning. The genes which encode OTX1 and OTX2 map to human chromosomes 2p13 and 14q21-q22, respectively.

Note: This product is for in vitro research use only and is not intended for use in humans or animals.
